Education

Saraswati College Of Engineering (Tier-2), Mumbai University

Jul 2019 - May 2023

Bachelor of Engineering in Computer Engineering (CGPA: 8.41 / 10.00)

Kharghar, Maharashtra

- **Relevant Coursework:** Data Structures and Algorithms (Java), Computer Networks, Cloud Computing, Big Data Analytics & Software Engineering

Experience

Stealth Healthtech Startup

Nov 2025 – Present

Software Engineer - Backend

Remote, United States

- Designed and deployed a serverless microservice backend — **30+ Lambda functions** across **200+ API endpoints**, fully defined as infrastructure-as-code — supporting **400+ users** with **p95 latency** under 400 ms.
- Built an asynchronous, event-driven processing pipeline(S3 Bucket, Event Bridge, SQS and Lambda function) that moved multi-second LLM work off the request path, dropping response time from 90s to under 2s across **1,000+ jobs at 99% success**, with dead-letter queues, retries, and alerting.
- Implemented **multi-tenant RBAC** with Cognito Social SSO, supporting admin, tenant, and end-user roles with row-level DynamoDB data isolation and JWT-based authorization.
- Built a WebSocket chat API that streams replies as they generate. Cut first-response time from **2.5s to 0.8s** by fetching the data a question needs in parallel, instead of letting the model request it one call at a time.
- Built a TypeScript monorepo sharing typed API, state, and UI packages across a React 19 web app and a React Native mobile app, cutting duplicated client code and keeping both platforms on one API contract.

Tata Consultancy Services

Feb 2024 – Oct 2025

Java Backend Engineer

Mumbai, India

- Scaled **event processing** capacity to **500K+** events by building a robust **microservices architecture**, maintaining consistent performance across high-volume production environments.
- **Eliminated data loss and manual intervention** during downstream outages by architecting a self-healing callback module with automated retries, circuit breakers, and Dead-Letter Queues (DLQ).
- Replaced a legacy data processing system with a **stateless pipeline** handling 1M+ financial records in minutes, achieving **99%** improvement in processing efficiency and faster business turnaround.
- **Led a 4-person team** in the design, architecture, and documentation of a new data-intensive pipeline, strategically replacing a legacy Struts-based system to achieve reliability and fault tolerance.

Projects

Serverless Backend Application | *Python, Lambda, Cognito, S3 Bucket, Cloudfront, CloudFormation, Github Actions*

- Architected serverless backend which process **10K+** records with millisecond latency and minimal operational overhead.
- Implemented secure **Role-Based Access Control (RBAC)** using **AWS Cognito** and JWTs for isolated admin/patient flows.
- Implemented **infrastructure provisioning** using **SAM Template/CloudFormation** and **GitHub Actions**, cutting deployment time by **70%** and ensuring reproducible builds.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript

Framework: FastAPI, Spring, Spring Boot, Spring Cloud, React

Databases: SQL Server, DynamoDB, PostgreSQL, MySQL, MongoDB

Tools: Linux, Git, Maven, Docker, Github Actions, Jenkins, Junit5, AWS, SAM CLI

Achievements

AWS Certified Cloud Practitioner | [credly.com/badges/ea42500c-0435-4992-97a5-11cf51f28def](https://www.credly.com/badges/ea42500c-0435-4992-97a5-11cf51f28def)
